

Jenkins Job

- A Jenkins job is simply a task that Jenkins will run.
- This task can be: build code, test it, run scripts, deploy an app, etc.
- Think of it as a "to-do task" for Jenkins like "Run these steps in order".

Workspace & Build History

TechZeen

- Every Jenkins job has its own workspace = a folder on your system
- It stores temporary files, source code, build outputs
- You can view it by clicking: Job → Workspace
- Build History shows all past runs (successful or failed)
- You can click on any build to see its output, logs, artifacts
