Lambda Function

- **No need to manage servers yourself.**

- **AWS manages the infrastructure for you.**

- **You only focus on writing and running code.**

- **Automatically scales up and down.**

- **You pay only when your code runs.**

aws

What is Lambda Function

- **A small piece of code that runs in the cloud.**
- **Triggered by events (e.g. file upload, API call, DB change).**
- **Fully managed by AWS.**
- **Supports languages like Node.js, Python, Java, etc.**

- **To run code without managing servers.**

- **To automate tasks when events happen.**

- **To save cost with pay-per-use model.**

- **To build fast and scalable apps.**

aws
